

公 司 简 介

Tangshan Aokai Forklift Parts Co., Ltd

1/The company was founded in 2011 with a registered capital of 60 million yuan.

2/The products are forklift parts, such as hot-rolled channel steel for forklift mast, welded mast assembly, forklift carriage assembly, etc.

3/The company covers an area of 330000 square meters and a construction area of 100000 square meters.

4/In 2022, 150000 tons of forklift mast beam were sold, with sales of 1.1 billion yuan, an increase of 47% over 2021.

5/The main customers are Heli, Hangcha, Kion, Toyota, Longgong, Liugong, Doosan, Clark, Hyundai, Hester forklift, nori, Zhongli and other domestic and foreign customers.

6/In 2017, the industrial chain was extended to produce mast assembly and forklift parts.

7/In 2022, 8000 mast assemblies and 150000 tons of mast beam were sold.

Introduction

企业荣誉 Company honor

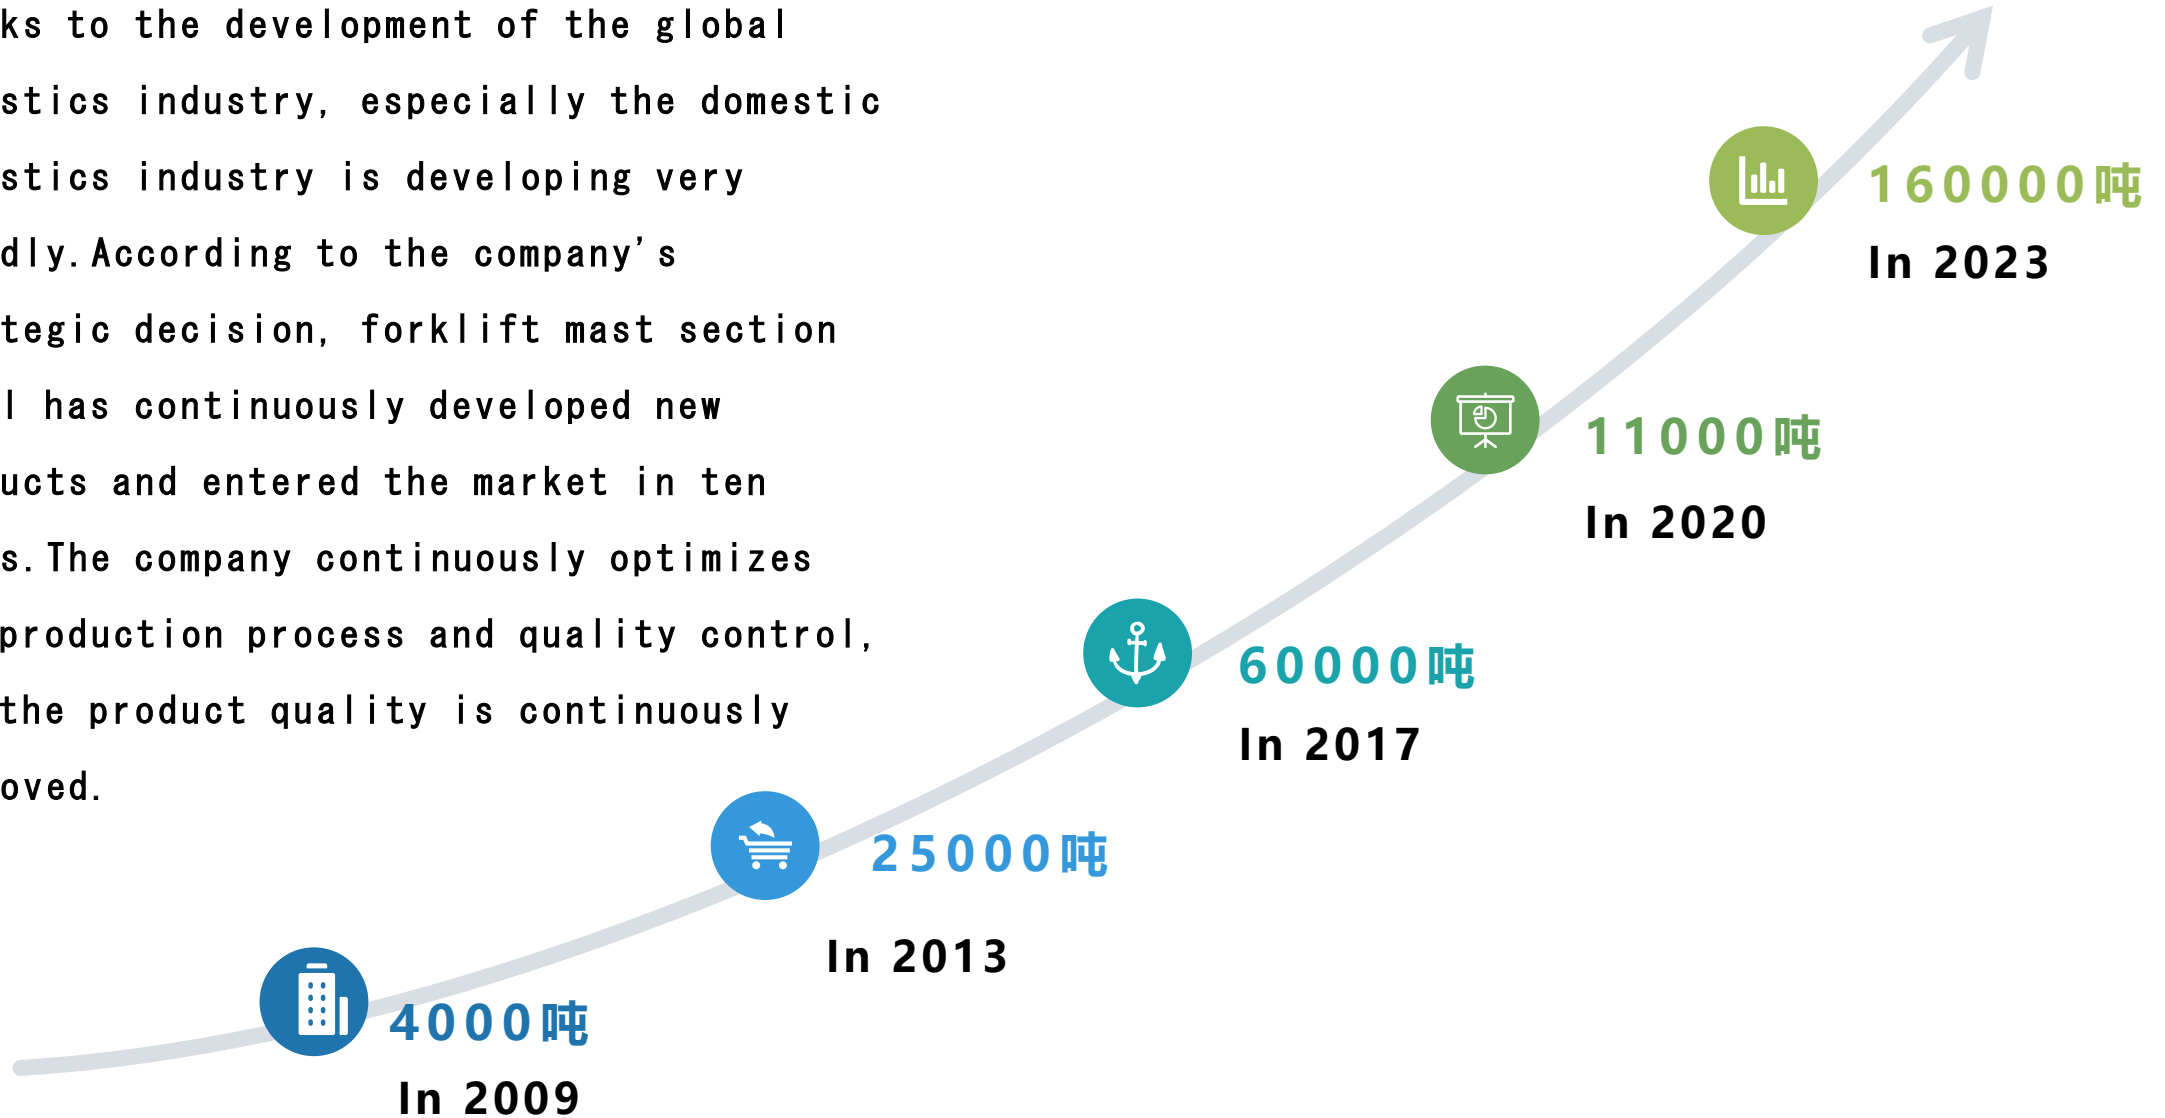

企业认证和资质certification and qualification

Product sales continued to grow

Thanks to the development of the global logistics industry, especially the domestic logistics industry is developing very rapidly. According to the company's strategic decision, forklift mast section steel has continuously developed new products and entered the market in ten years. The company continuously optimizes the production process and quality control, and the product quality is continuously improved.

Development history and important time nodes of the company

The development of the company has entered the fast lane

The company sold more than 100000 tons of forklift mast beam and mast assemblies throughout the year. Establish cooperation with KION group.

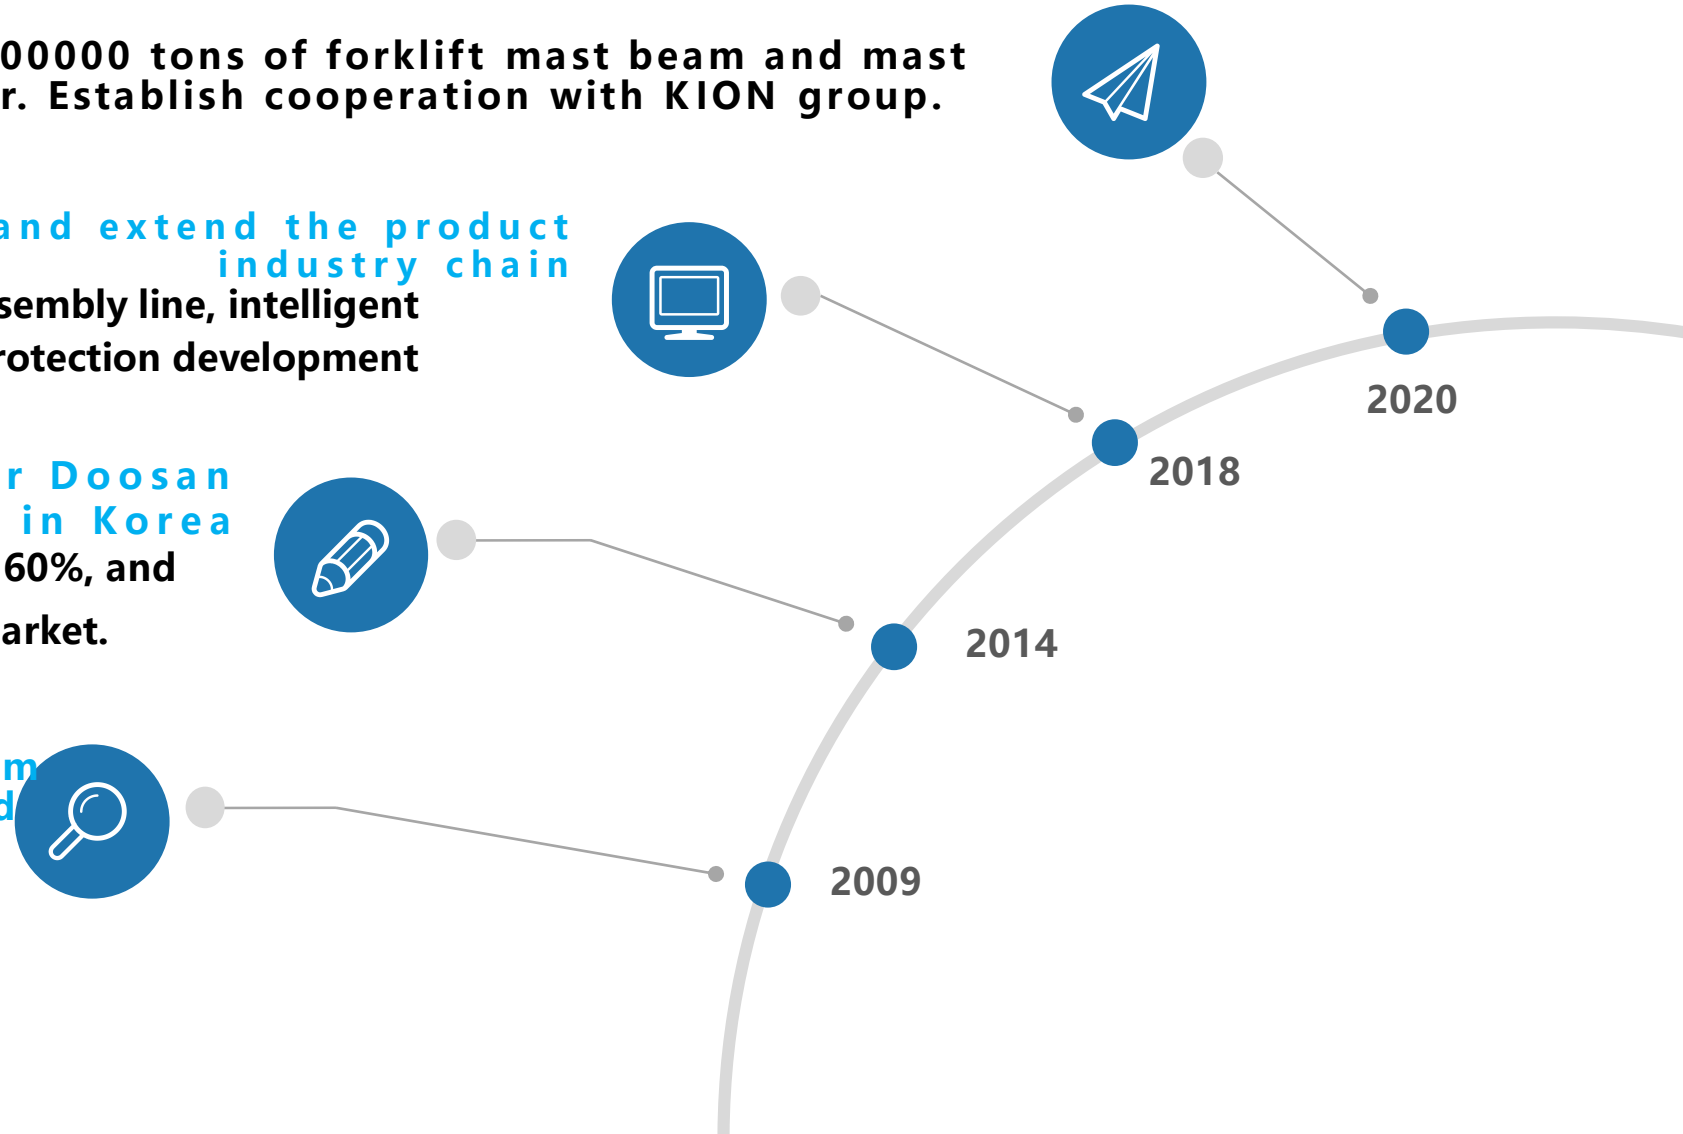

Upgrade and extend the product industry chain

Invest in the construction of mast assembly line, intelligent manufacturing and environmental protection development concept.

9 models developed for Doosan forklift in Korea

The domestic market share reached 60%, and new products quickly entered the market.

The first forklift mast beam was successfully developed
Cooperate with Hangcha to develop c160b forklift mast beam.

Universal rolling mill production line

Relying on the hot rolling universal mill production line of Tangshan Hongrun Industrial Co., Ltd., Tangshan shenghang has the ability to develop forklift mast beam. At present, more than 60 models have been successfully developed, and the product quality has been highly recognized by customers.

Various product categories

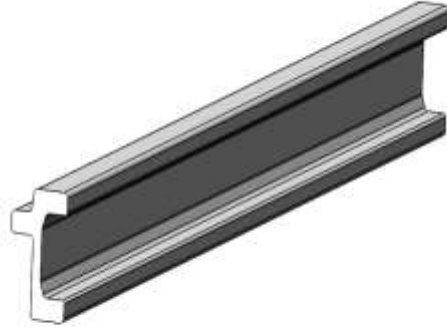

C beam

Hbeam

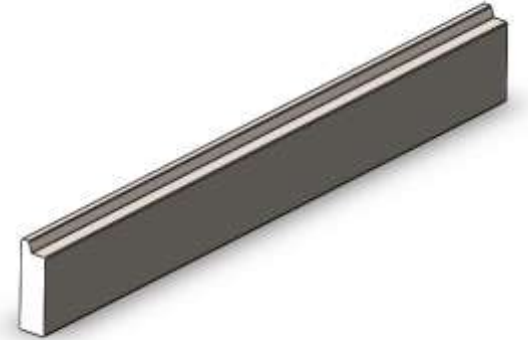

J beam

S beam

Carrige beam

Our company has reached strategic development cooperation with multiple companies, meeting the needs of customers for new products. For example, our company has developed 9 models of products for Linde forklifts.

Many partners develop together.

Domestic Heli Forklift, HangzhouForklift, KION、 NobleLift, Zhongli (EP), Lonking, Liugong, Zoomlion, Sany and other forklift host factories are our strategic partners. Our products can be used for 1-10 ton forklifts.

Hangcha lithium battery forklift is performing stacking screws to test and demonstrate the stability of the forklift mast. Forklift mast beam is the product produced by our company

Extend the industrial chain

With the continuous improvement of Tangshan shenghang hot-rolled forklift section steel market, many customers put forward higher requirements for shenghang, hoping that shenghang can produce forklift mast assembly for customers and reduce the manufacturing cost of forklift.

Tangshan shenghang started to build a complete forklift mast assembly line in 2018, using automatic processes such as machining, robot welding, painting and assembly.

At present, forklift mast and components have been mass produced and exported to foreign markets such as South Korea and Turkey.

Machining equipment

Forklift fork beam processing equipment, forklift mast correction equipment.

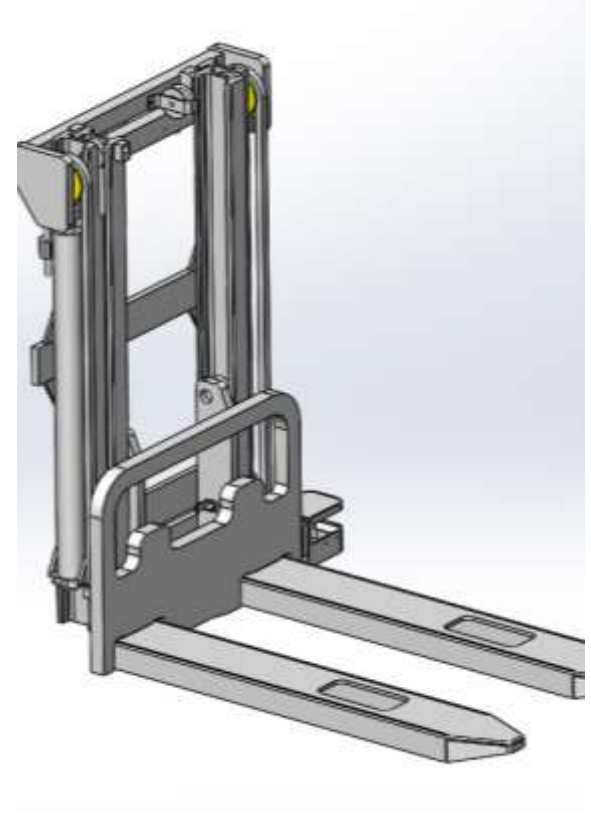

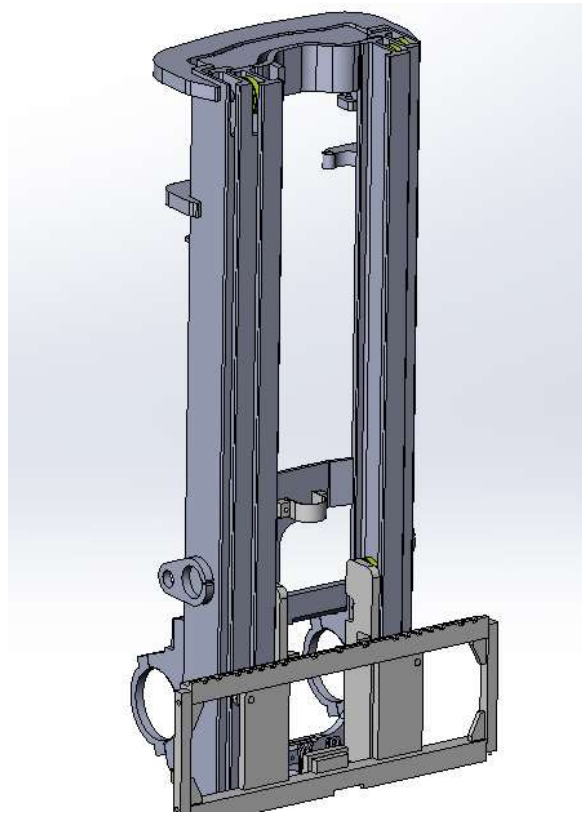

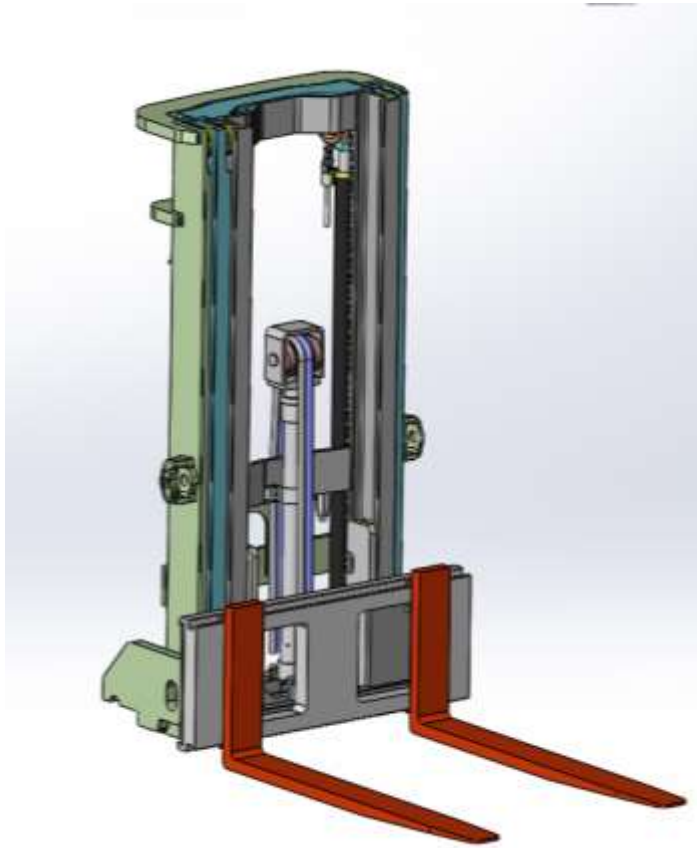

***Automatic machining center .**

***Welding robot, the company has passed ISO3834 welding certification.**

***Three coordinate detection equipment**

Our company can design forklift gantry assemblies according to customer needs , Our company has designed a four stage mast assembly for Liugong forklifts.

Forklift equipment manufacturers are looking for ways to reduce costs, change ideas and reform the supply chain. Our company is extending the industrial chain to promote the continuous recognition of customers and establish closer cooperative relations.

Product Image

The company always takes the continuous development of foreign markets as a very important corporate strategy, develops new customers, listens to their reasonable suggestions and continuously improves product quality.

A business meeting scene with a city skyline at sunset in the background. In the foreground, a person's hand is writing on a document with a pen. To the right, another person's hands are using a calculator. A laptop in the center displays various financial charts, including pie charts and bar graphs. Several documents with charts and tables are spread on the table. A large, semi-transparent blue diagonal graphic is overlaid on the image.

End, thank you for watching
